“Education is an admirable thing, but it is well to remember from time to time that nothing that is worth knowing can be taught.”

Oscar Wilde, *“The Critic as Artist”*, 1890
Irish dramatist, novelist, & poet (1854 - 1900)

Education and Outreach

I hear and I forget
I see and I remember
I do and I understand

Confucius

“Creativity is becoming more important than knowledge.
Knowledge is distributed on the Internet where anyone can find it.”

James Gimzewski

“As the circle of light [scientific knowledge] increases,
the circumference of darkness also increases.”

Albert Einstein

How can I teach creativity? Is there an intuitive understanding of Nanosystems?
Whats the benefit of transdisciplinary projects? How can scientists learn to talk?

Hackteria

Open Source Biological Art

HACKTERIA.ORG

Open Source Biological Art, DIY Biology, Generic Lab Equipment

Hackteria is a community based platform and information portal for the open sharing of knowledge, instructions, critical reflections and theoretical articles about open source art project dealing with biology | lifescience | biotechnology

<http://hackteria.org>

Hackteria is a collection of Open Source Biological Art Projects instigated in February 2009 by Andy Gracie, Marc Dusseiller and Yashas Shetty, after collaboration during the Interactivos'09 Garage Science at Medialab Prado in Madrid. The aim of the project is to develop a rich web resource for people interested in or developing projects that involve DIY bioart, open source software and electronic experimentation. As a community platform hackteria tries to encourage the collaboration of scientists, hackers and artists to combine their expertise, write critical and theoretical reflections, share simple instructions to work with lifescience technologies and cooperate on the organization of workshops, festival and meetings. The hackteria project is supported by: Bundesamt für Kultur, Migros Kulturprozent, Sir Ratan Tata Trust and Shristi.

To summarise, Hackteria is:

- * An open source 'make' resource for protocols, processes, tools, techniques and information for 'bio'-art and 'bio'-artists
- * A group of artists and scientists who organise and hold workshops, presentations and discussion forums based on these resources
- * A platform for the development and dissemination of knowledge related to DIY and open source hardware, software and wetware techniques for artists and researchers.

What is a hack?

Originally:

„A quick job that produces what is needed, but not well.“

1950s:

Amateur radio enthusiasts defined the term hacking as creatively tinkering to improve performance.

Today:

"A clever solution to a problem."

„An appropriate application of ingenuity.“

Hacker's Jargon

For a short introduction the following movie gives a nice overview of the hackteria project:
<http://vimeo.com/18052500>

HACKTERIA.ORG

Open Source Biological Art, DIY Biology, Generic Lab Equipment

In the last 3 years, since the founding of hackteria, we have been actively searching for collaborators, who share the same enthusiasm of sharing and developing techniques to work artistically with living systems and turn this knowledge into instructions and workshops, accessible to the amateur scientist/artist/hacker. Some important and fruitful collaborations are mentioned here.

Collaborators

The House of Natural Fiber, Yogyakarta, Indonesia

Georg Tremmel, Bioprescence, Japan/Austria

Antony Hall, Owlproject, UK

Stefan Doepner, F18institut, Slovenia/Germany

Alejo Duque, Switzerland/Columbia

Mac Cowell, DIYbio Boston, USA

Urs Gaudenz, SGMK & HSLU, Switzerland

Spela Petric & Maja Smrekar, Kapelica Gallery, K6/4, Slovenia

Brian Degger, Transitlab, Newcastle

Sachiko Hirose, EPFL

And many more...

Why should artists/designers/outsideers get involved with Synth-Bio(in particular) and Sci-Tech(in General)

"There is the obvious reasons that all outsiders bring in unique perspectives to any form of thinking-the artist/hacker has the courage to ask "stupid questions" which may not turn out to be stupid at all. the other is that the hacker/artist/designer may also come from spaces in which the technology is as important as the different contexts that it exists in -cultural/social/political which because a scientist(at least the way in which most of them are trained) may not be aware of or not be interested in."

Jugaad

Hack vs. Jugaad

A background image showing a bicycle in a shop. The bicycle is green and black, with a white seat. It is parked in front of a green metal rack. In the background, there are shelves with various items, including a sign that says "ABAB" and another that says "OTHER SHOP".

"Jugaad is a survival tactic, whereas a hack is an intellectual art form; i.e. Jugaad is the wife of the poor, and hack the pastime of the affluent cerebral. Jugaad is a hack to get around or deal with a lack of or limited resources, and has a class component to it - jugaad are things poor but clever people do to make the most of the resources they have. They do what they need to do, without regard to what is supposed to be possible."

BioCyberKidzz

The Hackteria BioLab introduces the world of microorganisms to children (age 7-10). Using a hacked microscope as the focal point, the participants will be introduced to microscopy, culturing living organisms and building simple tools to engage with the microscopic and the natural world around them. At the end of the workshop they will be able to take home little amulet Petri dishes with their own “living” fingerprints, a yeast powered balloon and simple bio-acoustic ear amplifiers. With this workshop we hope to emphasize that observing life is not just fun, but also takes time and patience.

BioCyberKidzz | Acknowledgements

The BioCyberKidzz Workshop has been developed as a result of collective brainstorming of many individuals and communities that are devoting their rich experiences in creating the alternative crossovers between arts and science. The dialogues have been encouraged by **HACKTERIA** and **Swiss Mechatronic Art Society** movements as the core initiatives for many open art & science projects which are establishing new meanings to DIY. Within this context the acknowledgments go to **Yashas Shetty**, **Nur Akbar Arofathullah/HONF**, **Julian Abraham - Togar/HONF** and **KOELSE** for executing new funky approaches to fermentation/biotechnology. **Sachiko Hirose** and **Brian Degger** for sharing with us their creative perspectives on microbiology as well as **Mackenzie Cowell** for introducing us his original way of understanding the field of body enhancements. **Jonas Ohrstom/anorg.net** by lending us his vehicle which has an amazing ability to serve us as a mobile lab and a flat at the same time as well as **Cirkulacija2** and **Ljudmila** for sharing with us their inspirational environments where our ideas could be executed to its final point. We are interested in introducing those vivid "invisible" worlds that are, as if they are not seen, very much present in our every day life.

BioCyberKidzz | Living Jewellery

POTATO STARCH MEDIUM:

Slice potatoes and boil them in 1 L of water for 1 h; drain the liquid through a sieve and gauze to get rid of the potatoes; add 10g of sugar and 13g of agar; stir; pour liquid in glass container, add enough water to the pressure cooker to cover the bottom (0,5 cm); heat under pressure for 20 min; let steam out; pour medium into plates (0,25 cm); let set for at least 4 hours.

MAKING THE JEWELRY:

For the living bacterial jewelry press a finger gently onto the plate, seal Petri dish with hot-glue gun and add string, a ring or a broche needle. Colonies will appear in a day or two, at first bacterial cultures, as the culture ages filamentous fungi will overgrow.

wetPONG

Platform for Hybrid-Games, Micro- and Nanotechnology and Life Sciences

*"Creativity is becoming more important than knowledge,
Knowledge is distributed on the Internet where anyone can find it."*

James Gimzewski, UCLA Distinguished Professor of Chemistry and Biochemistry

wetPONG is an international student competition based on a creativity approach in project based learning in microfluidics. The goal of the project is to design and build a prototype system of a playful game-concept that combines components of micro- and nanotechnology and living organisms. Interdisciplinary thinking, team collaboration and creativity are the main learning objectives. The entered projects will be presented at an international meeting and awarded by a jury of invited experts.

PAPER

www.rsc.org/loc | Lab on a Chip

Design, engineering and utility of biotic games†‡§

Ingmar H. Riedel-Kruse,¶* Alice M. Chung, Burak Dura, Andrea L. Hamilton and Byung C. Lee

Received 11th September 2010, Accepted 23rd September 2010

DOI: 10.1039/c0lc00399a

Games are a significant and defining part of human culture, and their utility beyond pure entertainment has been demonstrated with so-called ‘serious games’. Biotechnology – despite its recent advancements – has had no impact on gaming yet. Here we propose the concept of ‘biotic games’, *i.e.*, games that operate on biological processes. Utilizing a variety of biological processes we designed and tested a collection of games: ‘Enlightenment’, ‘Ciliaball’, ‘PAC-mecium’, ‘Microbash’, ‘Biotic Pinball’, ‘POND PONG’, ‘PolymerRace’, and ‘The Prisoner’s Smellemma’. We found that biotic games exhibit unique features compared to existing game modalities, such as utilizing biological noise, providing a real-life experience rather than virtual reality, and integrating the chemical senses into play.

Analogous to video games, biotic games could have significant conceptual and cost-reducing effects on biotechnology and eventually healthcare; enable volunteers to participate in crowd-sourcing to support medical research; and educate society at large to support personal medical decisions and the public discourse on bio-related issues.

Open Questions

- How can we teach creativity?
- How can artists/scientists profit from collaborations with each other?
- Is a transdisciplinary education crucial for innovation, especially in Nanotechnology?

Thanks for listening
